BootStrap Website

I based my initial website off of a bootstrap template inside of Dreamweaver. Using the template I looked at the setup for some elements like the nav bar and image carousel.With my design I went with simple, strong, and space.

I am always captivated by images of nebulas and choose a background of one that I felt captured my essence or what I hope my essence is. I had to adjust the transparency of the image to make sure the text was legible. I choose a one of my favorite fonts, raleway. I have always felt that raleway is a sleek and bold expression of technical prowess and professionalism. I struggled to adjust the font size on the navbar to make it more legible. With my design I made sure that it transferred well when being seen on mobile devices. I included a favicon of a "C". Accessibility is important to me so I made the font larger and with white text to contrast the dark background.

With this bootstrap website I hope to capture a feeling of bold, elegant, and to the point. I feel that I attain these points with the nebula background to add a sense of aww. My hope is that it would help to lose that generic bootstrap feel. With large bold text I try to stress astrong to the point feeling.
